

Vantage *Plus* Digital

Instructions

The Keeler Vantage Plus Digital is an indirect ophthalmoscope that captures images as seen by the user, primarily for teaching purposes.

Keeler does not recommend the use of the digital data for diagnostic purposes.

1 List of contents

- Vantage Plus binocular indirect ophthalmoscope
- Vantage Plus instructions
- Software driver and application
- USB Cable (5m)

2 Set up

Set up your Vantage Plus Digital as you would normally set up your indirect. The unit should be set up before starting examination procedures and not adjusted over patient.

3 Install the software

Refer to Software Setup and Quick Start Guide - EP59-09871 (Paper).

4 Plug in the USB cable

When the software has been installed, plug in the cable to the mini USB port - see example below

Plug in USB cable to your computer

Cable to USB port

Please see overleaf for further instructions and contact details

Keeler

5 Correct positioning

Position the binocular indirect ophthalmoscope on your head and adjust as you would normally, positioning the light patch as you would during a normal examination.

6 Adjust the camera patch

Adjust the camera patch on the screen by rotating the spindle.

Too high on the screen

Too low on the screen

Central on the screen

7 Adjust the focus lens

Adjust the focus of the lens by rotating the focus adjusting lever.

8 Working distance

The working distance is variable from 300-600mm from the front of the patient's eye to the front of the instrument with a 20D lens.

If the image on the screen is out of focus you need to move the optics forwards and or backwards until it becomes in focus.

Retinal image out of focus

Retinal image in focus
